

AGRO BUNKERS

Our company produces bunkers, tanks, and other plastic parts for agricultural machinery. We usually develop these products upon the request of mechanical engineering companies to replace metal parts.

The advantages of using plastic tanks over the metal ones:

- Cheaper production
- Notably less weight
- Resistance to the different types of corrosion
- Vibration resistance
- No need in additional painting

Do not hesitate to contact us in the case of the interest develop a new product and and learn more about the process of developing plastic spares as metal substitutes.

Grain tanks

Fertilizer tanks

Seed germination tank BT 48 for Cultivator

Fertilizer TANK BT 32 for seed drills

There is a possibility of designing and producing any kind of similar spare parts for agriculture machinery, using sketches or drawings of the client as well as without them. Our company developed special program which lets manufacturers of agricultural machinery to move from the existing metal elements to their plastic analogues in the shortest possible time and with minimum cost.

Tanks for chemical fertilizers

Tanks for seed dressing
