

MOBILE TOILET CABIN

Mobile toilet cabins serve to ensure compliance with health standards in construction, as well as during holidays, festivals and different championships.

Toilet cabin is designed and built by the best specialists. The design of toilet cabin meets the most stringent modern requirements. Pan (base) of the toilet cabin is made of high polyethylene, in contrast to the other toilet cubicles with wooden pallets, which provides more light and sturdy construction, as well as more long-term operation.

Toilet cabin's ventilation system is designed so that can not stay unpleasant and noxious fumes inside the cabin. Toilet cabin does not require additional lighting. Due to a white roof, which has good light transmission in the daytime enough natural light, and in the evening and night time is sufficient to establish a cabin near a streetlight.

Toilet cabins are made of high import polyethylene that is resistant to sudden changes in ambient temperatures from - 40 °C to + 60 °C. Special additives in polyethylene resistant to make the cabin directly exposed to solar ultraviolet radiation. Toilet cabins are lightweight and easily transported both assembled and disassembled.

To provide sanitary facilities: on the construction, at festivals, on the championships, at rallies, at summer camps, at campsites, storage tank with a capacity of 250 Liters (more than 500 visits), dimensions 1 200 x 1 200 x 2 400 mm
